

CuroGens Shipping Manager

Exclusively for Microsoft Dynamics 365 F&SCM (F&O)

Is your customer service staff regularly taking a beating from customers demanding to know where their packages are?

You know they were sent, but there is no easy way to access the tracking information without going through a pile of packing slips, while the customer is still on the phone and getting angrier by the second. This is not an effective way to conduct business.

Enter Shipping Manager from CuroGens, created as a completely integrated solution for Microsoft Dynamics 365 Supply Chain Management. Unlike other products and features (such as the Small parcel shipping feature in the product), our solution is comprehensive and advanced, yet accessible using only the standard inventory management module.

We created Shipping Manager to reduce the time, frustration and manual entry that has become necessary for shipping from Microsoft Dynamics 365 Supply Chain Management. We took the best features from Advanced Warehouse Management and Transportation Management modules – and combined them into a single, comprehensive, easy-to-use solution.

About CuroGens:

CuroGens is a Microsoft Gold partner and software solutions company dedicated to working with companies and individuals that share the desire to make a positive impact on the world and understand the broader implications of their own products and services. We are committed to creating innovative solutions that help companies thrive, make informed business-critical decisions and spark growth.

PRODUCT  TRACKING  CHARGES

FEATURES

Shipping Carriers Defined:

Website, vendor # (for pay), services, break master (determines rates by weight and distance)

- Integrates with D365 F&SCM (F&O) and finds all customer delivery/postal locations
- Can be manual or auto, user defined

Packing Types

Basic defaults aka freight charges

- Flags limits based on carrier specs
- Default parameters - if there are max, weight limits, it won't allow it to go through

Pre-load Weight Specs

Accurate freight charges per line item on the sales order

- Calculates charges more accurately by using per item weight x quantity x rate service defined
- Better rate shopping experience

Rate Shopping:

Compare pricing among carriers

- Identify rates and transit times (per box item)
- Packing slip is created based on mode of delivery (1 for each)
- Recalculates shipping rates and updates inventory (based on packing slips)
- Rates based on actual weight - not an estimate

Box Button:

Box profiles - what item, how many, shipping mode

- Labels for each
- Pulls in tracking number for items
- Updates shipping charges and inventory after boxes are updated or changed
